

Emeka Onyedika

Software Engineer

- **Location:** Nigeria
- **Email:** chuksremi15@gmail.com
- **Phone:** +2348160564759
- **Github:** github.com/chuksremi15
- **Portfolio:** chuksremyblog.web.app
- **LinkedIn:** <https://www.linkedin.com/in/emeka-onyedika/>

Summary

Results-driven Software Engineer with over 6 years of experience bridging Web2 architecture and Web3 decentralized applications. Proven track record in leading engineering teams, architecting full-stack applications (MERN, React Native), building and deploying secure smart contracts. Adept at driving product lifecycles from conceptualization to deployment across fintech and blockchain ecosystems.

Technical Skills

- **Languages:** TypeScript, JavaScript, Solidity, Rust, SQL
- **Frontend & Mobile:** React, Next.js, React Native, Redux, TailwindCSS
- **Backend & Databases:** Node.js, Express.js, PostgreSQL, MongoDB, Firebase
- **Web3 & Smart Contracts:** Ethers.js, Hardhat, Truffle, Foundry
- **Testing & QA:** Jest, Mocha, Chai, Playwright.
- **DevOps & Architecture:** Docker, Git, CI/CD Pipelines

Work History

Backend and Blockchain programmer at Koinwise

(June 2025 - Present | 10 months)

Website: getkoinwise.com

Koinwise is a fintech mobile application and non-custodial crypto wallet combining digital asset management with traditional finance capabilities.

- Architected the full application flow from the Node.js backend to react native mobile.
- Spearheaded the complete blockchain wallet architecture for the mobile application, utilizing Web3Auth for secure, non-custodial user onboarding.
- Integrated Biconomy to enable Account Abstraction, successfully implementing gasless transactions.

- Built and deployed smart wallet contracts.
- Engineered a complete backend life cycle for buying and selling crypto on-chain using a backend-maintained fiat wallet
- Integrated Monnify's API to securely process fiat deposits into dedicated user accounts while instantly syncing in-app fiat balances.
- Managed end-to-end server deployment and infrastructure, containerizing the backend with Docker, configuring NGINX, and hardening security.

Blockchain programmer at Clynto | USA

(September 2024 - March 2025 | 7 months)

Website: clynto.com

Clynto is an on-chain lending and borrowing protocol that allows users to lend and borrow crypto assets on EVM-compatible blockchains using a peer-to-peer model.

- Developed and deployed a proxy-based smart contract to implement Clynto's lending and borrowing model.
- Wrote comprehensive unit tests for the smart contract, hooks, and end-to-end (E2E) workflows.
- Utilized Solidity, TypeScript, Hardhat, Viem, Wagmi, React Query, and Playwright for development and testing.

Blockchain programmer at BuidlGuidl | USA

(October 2023 - May 2024 | 8 months)

Buidlguidl portfolio: app.buidlguidl.com/builders/

BuidlGuidl is a decentralized autonomous organization acting as the community and incentivization layer around scaffold-eth and speedrunethereum.com.

- Built and shipped Buildlguidl challenge problems and personal blockchain projects.
- Utilized Solidity, Typescript, Hardhat, Viem, Wagmi, React-query.

MERN stack dev at AI Movement | Nigeria

(September 2022 - December 2023 | 1 year 4 months)

Website: aimovement.tech

AI Movement is a community of private investors, institutional investors, and technology experts. Served as the CTO at AI Movement, leading a cross-functional team of frontend, mobile, and UI/UX professionals.

- Responsible for the full cycle of the application development, which includes writing code, writing tests, and inspecting the entire code base.
- Drawing out system architecture/blueprints for projects.
- Ensuring seamless functionality of the company app and fixing bugs.
- Worked with React, Redux, Express.js, Node.js.

Full-stack Blockchain Programmer at Omitch | Nigeria

(January 2022 - June 2022 | 6 months)

Webapp: omitchapp.web.app

Website: omitchgames.web.app

Omitch is a casino start-up that integrated web2 games and handles payments with web3.

- Responsible for the full cycles of the blockchain development, which include writing smart contracts, writing tests, and integrating ABIs to the frontend.
- Converted casino business logic to code.
- Integrated games from a gaming provider.
- Worked with Hardhat, Mocha, Chai, Ethers, and Web3.js.

Frontend Programmer at Canary Tech | Nigeria

(December 2020 - December 2021 | 1 year)

Canary Tech is the parent company of Parapay, a fintech startup.

- This product handled more than 1 billion naira in transactions.
- Collaborated with a team of two developers in building the admin section of the fintech app
- Integrated API's to frontend Applications.
- Developed Admin front-end using React and Redux-saga for state management.
- Worked with Chakra UI, Sass, and Redux-saga
- Collaborated with a team of two developers in building the admin section of the fintech app.

Projects

Koinwise

Link: getkoinwise.com

- A comprehensive fintech mobile application and non-custodial crypto wallet combining digital asset management with traditional finance capabilities

Frenfinance

Link: frenfinance.xyz

- FrenFinance is an on-chain lending and borrowing platform designed to include support for low-to mid-cap tokens with healthy liquidity.

Lyxaxis

Link: www.lyxaxis.xyz

- Lyxaxis is a multi-signature wallet with support for universal business profiles on Lukso.

Chain link CLI (NPM package)

Link: npmjs.com/package/chainpeekcli

- A blockchain CLI that gives you easy access to blockchain data from your command line and allows you to deploy a single-file smart contract.

Rust GREP (globally search a regular expression and print) CLI

Link: github.com/Chuksremi15/rust_cli_minigrep

- A command-line tool for searching for patterns in files, implemented in Rust. This project is a simplified version of the Unix grep command, built as an exercise while learning Rust.

Education

Nnamdi Azikiwe University

(December 2017 - December 2021)

- BSC in Computer Science
