

Emeka Onyedikachi

Software Engineer

Nigeria | chuksremi15@gmail.com | +2348160564759 | **GitHub:** github.com/chuksremi15 |

Portfolio: chuksremyblog.web.app | **LinkedIn:** linkedin.com/in/emeka-onyedika

Summary: Results-driven Software Engineer with over 6 years of experience bridging Web2 architecture and Web3 decentralized applications. Proven track record in leading engineering teams, architecting full-stack applications (MERN, React Native), and building and deploying secure smart contracts. Adept at driving product lifecycles from conceptualization to deployment across fintech and blockchain ecosystems.

Technical Skills

- **Languages:** TypeScript, JavaScript, Solidity, Rust, SQL
 - **Frontend & Mobile:** React, Next.js, React Native, Redux, TailwindCSS
 - **Backend & Databases:** Node.js, Express.js, PostgreSQL, MongoDB, Firebase
 - **Web3 & Smart Contracts:** Ethers.js, Hardhat, Truffle, Foundry
 - **Testing & QA:** Jest, Mocha, Chai, Playwright
 - **DevOps & Architecture:** Docker, Git, CI/CD Pipelines
-

Work History

Backend and Blockchain Programmer | Koinwise

June 2025 - Present (10 months) | www.getkoinwise.com

Koinwise is a fintech mobile application and non-custodial crypto wallet combining digital asset management with traditional finance capabilities.

- Architected the full application flow from the Node.js backend to the React Native mobile frontend.
- Spearheaded the complete blockchain wallet architecture for the mobile application, utilizing Web3Auth for secure, non-custodial user onboarding.
- Implemented Account Abstraction and gasless transactions.
- Engineered a complete backend life cycle for executing on-chain crypto trades, supported by a custom-built, backend-maintained fiat wallet.
- Integrated Monnify's API to securely process fiat deposits into dedicated user accounts while instantly syncing in-app fiat balances.
- Managed end-to-end server deployment and infrastructure, containerizing the backend with Docker, configuring NGINX, and hardening network security.

Blockchain Programmer | Clynto (USA)

September 2024 - March 2025 (7 months) | clynto.com

Clynto is an on-chain lending and borrowing protocol that allows users to lend and borrow crypto assets on EVM-compatible blockchains.

- Developed and deployed a proxy-based smart contract to implement Clynto's peer-to-peer lending and borrowing model.
- Wrote comprehensive unit tests for the smart contract, hooks, and end-to-end (E2E) workflows.
- Utilized Solidity, TypeScript, Hardhat, Viem, Wagmi, React Query, and Playwright for full-cycle development and testing.

Blockchain Programmer | BuidlGuidl (USA)

October 2023 - May 2024 (8 months) | app.buidlguidl.com/builders/

BuidlGuidl is a DAO acting as the community and incentivization layer around scaffold-eth.

- Built and shipped BuidlGuidl challenge problems and personal blockchain projects utilizing Solidity, TypeScript, Hardhat, Viem, Wagmi, and React Query.

CTO & MERN Stack Developer | AI Movement (Nigeria)

September 2022 - December 2023 (1 year 4 months) | aimovement.tech

AI Movement is a community platform for private investors, institutional investors, and tech experts.

- Served as CTO, designing system blueprints and leading a cross-functional team of frontend, mobile, and UI/UX professionals.
- Managed the full-cycle development of the MERN stack application (React, Redux, Node.js, Express.js), enforcing code quality and writing robust test suites.

Full-Stack Blockchain Programmer | Omitch (Nigeria)

January 2022 - June 2022 (6 months) | omitchgames.web.app

Omitch is a Web3-integrated casino startup bridging traditional games with decentralized payments.

- Managed full-cycle blockchain development, converting complex casino business logic into secure smart contracts using Hardhat, Mocha, and Chai.

Frontend Programmer | Canary Tech / Parapay (Nigeria)

December 2020 - December 2021 (1 year)

Canary Tech is the parent company of Parapay, a high-volume fintech startup.

- Developed the admin frontend for the fintech application using React, Redux-Saga, and Chakra UI, directly supporting a platform that processed over 1 billion Naira in transactions.
- Collaborated with a two-developer team to integrate REST APIs and ensure seamless application state management.

Projects

- **FrenFinance** (frenfinance.web.app): An on-chain lending and borrowing platform designed with support for low-to-mid-cap tokens with healthy liquidity.
- **Lyxaxis** (lyxaxis.xyz): A multi-signature wallet supporting universal business profiles on the Lukso blockchain.
- **Chainpeek CLI** (npmjs.com/package/chainpeekcli): A Node.js NPM package that provides command-line access to blockchain data and enables single-file smart contract deployment.
- **Rust Minigrep** (github.com/chuksremi15/rust_cli_minigrep): A custom command-line tool implemented in Rust for globally searching and printing regular expressions in files.

Education,

Nnamdi Azikiwe University, BSc in Computer Science (December 2017 - December 2021)
